Executive summary

Agricultural science and technology is rapidly becoming one of the world’s fastest growing and exciting markets. It is driven by global changes: a rising population, climate change, rapid development of emerging economies with western lifestyle aspirations and growing geopolitical instability around shortages of land, water and energy. A technology revolution is also taking place. Breakthroughs in nutrition, genetics, informatics, satellite imaging, remote sensing, meteorology, precision farming and low impact agriculture are driving major global investment in Agri-Tech.

In order to meet these challenges, both companies and researchers need to work together to develop innovative technologies and processes which provide solutions that are economically, environmentally and socially sustainable. That is the vision of the Government’s UK Strategy for Agricultural Technologies [https://www.gov.uk/government/publications/uk-agricultural-technologies-strategy], which aims to put the UK at the forefront of the sustainable intensification of agricultural production.

To help achieve this, the Government is investing £70m in an Agri-Tech Catalyst. The Agri-Tech Catalyst offers funding for single and collaborative projects, taking innovative ideas from any sector or discipline with the potential to provide an economic boost to the UK Agri-Tech industry, by tackling challenges in agriculture. These may be domestic or international challenges: funding for the Agri-Tech Catalyst includes an element specifically targeted at contributing to international development.

Funding through the Agri-Tech Catalyst is available to UK businesses of any size, as well as researchers. A research base partner is defined as a university, research institute, public sector organisation or research and technology organisation. Funding is also available to partners in developing countries for applications targeting international development challenges.

Support is available for projects arising from any sector or discipline that are aimed at addressing relevant challenges, and multi-disciplinary collaborations are encouraged.

Please note that grant rates for industry changed from Round 3 onwards. Industry grant rates for the Late Stage Awards have also changed from Round 5 onwards. These are summarised in the tables under the Funding section on pages 9 and 10 of this document.

Scope

The Agri-Tech Catalyst offers funding for single and collaborative projects addressing the challenges described above. The Catalyst will take innovative ideas from any sector or discipline that demonstrate the potential to advance sustainable intensification of agriculture and deliver economic impact for the UK Agri-Tech industry by tackling domestic or international challenges. The scope of the Catalyst includes:

- Primary crop and livestock production, including aquaculture
- Non-food uses of crops including ornamentals
- Food security and nutrition challenges in international development
- Addressing challenges in downstream food processing, provided the solution lies in primary production

Applications from the aquaculture and livestock sectors are particularly encouraged, as are crop sector projects targeting weed control and on-farm storage and management. Projects targeting the late-stage award category are also encouraged.
The following are out of scope and will not be funded: forestry; wild capture fisheries and equine-related proposals.

Examples (illustrative, not exhaustive) of the types of topics that could be supported include: all aspects of arable and horticultural food production including plant genetics and breeding, crop establishment; agronomy, precision farming, soil and land management practices; tackling weeds, pests and diseases; crop harvesting and storage; sustainability of production methods; non-food uses of crops (for example, for biomass or high-value products); developing sustainable solutions to increase the productivity of the UK and global livestock sector (including aquaculture) while reducing the industry's adverse impacts on the environment, reducing waste and limiting human health issues; livestock genetics and breeding, health and disease, nutrition, welfare and husbandry (such as housing and management practices).

In all projects, multi-disciplinary collaborations involving engineering, IT or any other relevant disciplines and approaches are encouraged.

The government (BIS, Defra and DFID) along with the Biotechnology and Biological Sciences Research Council (BBSRC) and Innovate UK are working in partnership with industry to secure appropriate match funding to deliver the Agri-Tech Catalyst. The scheme aims to provide responsive and effective support for the best opportunities arising in the UK that address the challenge of the sustainable intensification of agriculture. This will include innovative Agri-Tech solutions to both domestic and global agriculture productivity and include an element specifically targeted at contributing to international development.

Grant funding through the Agri-Tech Catalyst is available to UK commercial businesses (SMEs and large companies up to multinationals) and researchers looking to develop innovative collaborative solutions to agricultural challenges in the UK and developing countries. Funding will be available to partners in developing countries for applications targeting international development challenges.

Support is available for projects arising from any sector or discipline that are aimed at addressing relevant challenges, realising the vision of the government’s UK Strategy for Agricultural Technologies: (https://www.gov.uk/government/publications/uk-agricultural-technologies-strategy), and enabling the sustainable intensification of agricultural production.

For the Early Stage Awards and Industrial Research Awards, the Agri-Tech Catalyst programme supports collaborative applications only, either business : business or business : research. Multi-disciplinary collaborations are encouraged. For the Late Stage Awards, applications may be collaborative or single.

Three categories of award are available under this scheme, which are designed to support the maturation of an idea from concept to commercialisation, and applicants must decide which award category is most appropriate for their work. These are: -

- Industrial research Awards http://bit.ly/1Hksv1U
- Late Stage Awards: Experimental Development http://bit.ly/1Jnpro4

These categories are designed to form a pipeline, supporting the development of an idea from concept to commercialisation, from the early-stage exploration of commercial and technical potential through to proving utility in the field and development prior to commercialisation.

Applications are received for assessment by independent experts in successive rounds of the competition until the £70m funding has been committed. Applicants may apply for the award category most appropriate for their work without having received a prior award.
Early-stage Awards

Technical feasibility studies
The objective of these awards is to explore the commercial potential of an early-stage innovative idea. All projects must be based on prior underpinning research evidence. Examples of project work in this early-stage award category may include, but are not limited to:

- development projects that encompass; validation of disease targets (but not discovery of novel targets involving fundamental research), identification of agchem candidates, characterisation and optimisation, initial manufacturing process development and formulation, demonstration of safety and efficacy, plant and animal breeding trait assessment and marker identification, material testing for engineering solutions, etc.
- diagnostic devices or other analytical technology projects may include exploration of user requirements, initial design and engineering, systems integration and prototyping, laboratory based evaluation and characterisation.

Applicants wishing to evaluate or trial the commercial potential of their technologies in a field testing or real-life environment should apply for a late-stage award.

Key features of early-stage feasibility study awards:
Research or business-led collaborative projects that enable the exploration/evaluation of the commercial potential of an early-stage scientific idea, through:

- Review of research evidence and application potential in agri-food production
- Assessment of business opportunity
- Scoping for further development
- Duration – up to 18 months
- Typical project size – £150k - £500k
- Applications can be research or business-led (research led must collaborate with at least one business)
- Funding proportion for business – up to 55% of total eligible project costs for SMEs; 45% for large companies
- Total combination of research partner costs must not exceed 50% of the total project costs
- Academics funded at 100% via Je-S (80% of Full Economic Cost)

Industrial research awards
Industrial research awards will evaluate the technical feasibility of an idea and establish proof of concept and potential routes to exploitation. Such proposals will embrace longer term studies in all relevant disciplines that demonstrate the potential to advance sustainable intensification of agriculture and deliver economic impact. As with feasibility studies the work included in these projects will be dependent on the proposed application of the technology and the nature of the technological solution.

Further examples of project work in this category may include but are not limited to:
- development of work undertaken in early stage feasibility studies
- all aspects of plant agronomy, animal (incl. aquaculture) husbandry
- related engineering, IT, electronics and other non-biological solutions.

Key features of industrial research awards:
Business-led collaborative projects that develop any relevant innovative solutions from across all sectors of the Agri-Tech sector and/or other industrial sectors, that advance the sustainable intensification of global agriculture (including aquaculture) by developing and adopting novel, innovative solutions. This could include:
- Extending proof-of-concept using plot/ field trials
- Exploration of production mechanisms
- Prototyping (lab based)
- Product development planning and market testing
- Duration – up to 3 years
- Project size – up to £3 million*
- Application must be business-led
- Funding proportion for business – up to 45% of total eligible project costs for SMEs; 35% for large companies
- Total combination of research partner costs must not exceed 50% of the total project costs
- Academics funded at 100% via Je-S (80% of Full Economic Cost)

*The £3 million limit relates to the over-all costs for any one project. For projects where the total project costs are in excess of £3 million please contact the helpdesk before applying.

**Late–stage Awards**
These projects evaluate or trial the commercial potential of an innovative concept. The objective of these late stage awards is to assist business to work individually or collaboratively with other industrial organisations (research-base partners may participate only as sub-contractors to business partners) on research & development that requires a short period of further study AFTER embarking on a larger R&D project which may have been publicly funded or have been undertaken privately.

**Experimental development**
These awards will enable applicants to trial innovative concepts in a real-life environment ahead of large-scale deployment.

We expect that all projects will be based on significant prior research where the feasibility has already been demonstrated. Examples of project work in this late-stage award category may include projects looking to achieve the first tests in a real-life environment (e.g. field trial setting) to evaluate commercial potential (crop or livestock as appropriate).

In addition, projects can trial and test technologies in the real-life operational environment, investigating product safety and effectiveness through to the validation of the final product design and production of final prototype. In some cases we may support early adoption studies.

Projects may include work to support the acquiring, combining, shaping and using of existing scientific, technological, business and other relevant knowledge and skills for the purpose of producing plans and arrangements or designs for new, altered or improved products, processes or services.

**Key features of experimental development awards:**
Projects to support companies working individually or collaboratively with other business partners to trial an innovative concept in a real-life environment ahead of large-scale deployment through:

- the conceptual definition, planning and documentation of new products, processes or services
- producing drafts, drawings, plans and other documentation, provided that they are not intended for commercial use.
- the development of commercially usable prototypes

Please note: experimental development shall not include routine or periodic changes made to products, production lines, manufacturing processes, existing services and other operations in progress, even if such changes may represent improvements.
• Duration – up to 12 months
• Typical project size – up to £1 million*
• Applications may be from a single business or a collaborative consortia of businesses**
• Funding proportion for business - up to 35% of total eligible project costs for SMEs; 25% for large companies
• Research partners may participate as subcontractors to a business partner.

*projects exceeding £1m total project costs should contact Customer Support Services before applying.
**projects targeting international development must include a UK business partner and developing country partner

For definitions of the research categories please click here: https://interact.innovateuk.org/-/funding-rules

Please note that grant intervention rates for industry partners submitting into the Agri-Tech catalyst will be as stated in the Funding section of this Guidance document.

Application process
The Agri-Tech Catalyst awards are allocated through a competitive process. For early-stage and late-stage awards, the competition involves a single-stage process. The industrial research award category involves a two-stage process which involves a written expression of interest, followed by a full application for invited applicants.

Those applicants who successfully complete an early-stage feasibility study may apply for subsequent consideration in the industrial research category, and will be offered direct entry to the second stage of the competition. In addition, there may be opportunities for projects in the industrial research category to move forward for consideration for late-stage awards, but this will also involve a competitive process and there may be potential timescale restrictions.

For some projects therefore, it may be appropriate to include late-stage work streams within an industrial research proposal at the appropriate grant rate and at the time of applying for an industrial research award.

We may apply a portfolio approach across the different award types, subject to applications reaching the required quality threshold.

This guidance is for the Early-Stage Awards only. Please see separate guidance documents for the other types of awards. The Early-Stage Awards category will follow a single stage process which involves a written application.

Competition briefings to explain the application process will be held during the course of the programme both physically and using alternative media (such as webinar) and we strongly recommend that you attend or access this resource before submitting your application. Further information on these briefing events can be found on the competition page http://bit.ly/1Jnpro4

Important Note: To enter into this competition you will be required to register via the competition website at https://interact.innovateuk.org/ This will trigger an email containing a username and password for the secure upload facility, along with a unique application form and number. Please note the typical turnaround time is 2 working days and so there may be a short delay in receiving your login details once you have registered. Please note: The last date to register for an application form is 1 week prior to the close date.

If unsuccessful in a particular round, you may choose to re-apply for funding in this category of grant once only for the same project.
How to use this document

This document contains the eligibility criteria, key dates, competition process and application form details specific to the Early-Stage Award category of the Agri-Tech Catalyst competition. For other award categories in this competition, please see the relevant guidance for that category as the process and application requirements will be different. It is essential for you to read this guidance before applying.

**Competition webpage** – this resource will provide the technical summary, background, challenge, scope, research area, funding available, entry requirements, key events and dates; as well as the point of reference for all competition enquiries, the helpline details. To access the competition website click here: [http://bit.ly/1Jnpro4](http://bit.ly/1Jnpro4)

In addition, the numbered items below offer further general guidance and are available in full on our website to help you complete your application. Links to these sections are below, and referenced throughout this document.

1. **The project costs we fund and how to fill in the finance forms**
   This guidance contains detailed information on which project costs are eligible for funding, how to complete the finance forms as well as submitting any academic costs into the Je-S system (a requirement for all academic partners). [https://interact.innovateuk.org/-/project-costs](https://interact.innovateuk.org/-/project-costs) or download for print.

2. **Submitting your application**
   This guidance explains how to submit your application, any accompanying finance forms and appendices. [https://interact.innovateuk.org/-/submitting-your-application](https://interact.innovateuk.org/-/submitting-your-application)

3. **What happens after you have submitted your application**
   This guidance provides information on the Agri-Tech Catalyst assessment process, notification of decisions and how to access your assessor feedback. [https://interact.innovateuk.org/-/what-happens-when-you-have-submitted-your-application](https://interact.innovateuk.org/-/what-happens-when-you-have-submitted-your-application)

4. **What happens if you are successful**
   This guidance tells you what happens if your project is granted funding. This includes information on the conditional offer letter, timescales, further information we require from your project team, the Grant Confirmation Letter and the project monitoring process once you start your project. [https://interact.innovateuk.org/-/what-happens-if-you-are-successful](https://interact.innovateuk.org/-/what-happens-if-you-are-successful)

5. **How to find out more**
   This guidance provides links to other areas which may be useful for completing your project. [https://interact.innovateuk.org/-/finding-out-more](https://interact.innovateuk.org/-/finding-out-more)

These guidance notes are based on current Innovate UK competition processes but are presented as a guide pending future refinement should that prove necessary.

Innovate UK complies with the requirements of the Data Protection Act 1998 and is committed to upholding the data protection principles. Further details with regards to the collection, storage, processing and disclosure of personal information by Innovate UK is accessible from the above link.
1. Competition information

**Competition**

*Agri-Tech Catalyst Early-Stage Awards*

For explanation of the scope of this Competition please refer to the Competition Overview and flyer documents which can be downloaded from the Competition website available here: [http://bit.ly/1Jnpro4](http://bit.ly/1Jnpro4)

**Eligibility**

- Research or business-led collaborative projects that enable the exploration/evaluation of the commercial potential of an early-stage scientific idea, through:
  - review of research evidence and application potential in agri-food production
  - assessment of business opportunity
  - scoping for further development
- Duration – up to 18 months
- Typical project size – £150k - £500k
- Applications can be research or business-led (research led must collaborate with at least one business)
- Funding proportion for business – up to 55% of total eligible project costs for SMEs; 45% for large companies
- Total combination of research partner costs must not exceed 50% of the total project costs
- Academics can be funded at 100% via Je-S (80% of Full Economic Costs)

**Funding**

Overall project funding is dependent on the research category(s) undertaken and the types of organisation participating in the project

- We anticipate that projects submitting into this Award will be primarily focused on technical feasibility studies and not undertaking research more appropriate to the other types of Award within the Agri-Tech Catalyst competition.
- We expect collaborative projects to be £150k - £500k in total project cost. The amount of funding available to each partner will vary according to the type of organisation, size and type of research being conducted in the project. If funding sought is above the upper limit, please contact Customer Support Services on 0300 321 4357

Please note: the grant rates for the Agri-Tech Catalyst changed with effect from Round 3

*Where collaborations involve one or more academic or research organisation partners, the total eligible costs of all academic and research partners may not exceed 50% of the total project costs.

**PSEO or RO – Where organisations are not undertaking economic activity or obtaining economic benefit from a project, and where they are not giving economic benefit to other project participants.

This Competition applies to collaborative research projects.

For the Early stage awards category, the lead partner may be either a business or a research organisation.

The total non-business portion of eligible costs may not exceed 50% of the total eligible project costs.

The table below provides a worked example of the cost sharing aspect of collaboration from a consortium perspective:

**Example:** Technical Feasibility Studies; Total Cost of Project £700,000; 3 Partners (2 business, 1 academic)

</tr>
</tbody>
</table>

*100% of 80% FEC.

**Academic eligible costs are 80% of their full economic costs. The balance of 20% must not be shown as a contribution.

**Projects that span more than one category of research**

Depending on the level of maturity of the proposed technology the work packages in a project might represent more than one category of research. For example some may include a range of Pre-Industrial Research and Industrial Research (see the Executive summary of this document for a broader definition of these research areas). You should identify which work packages in the project fit within each category of research and seek a grant commensurate with the aggregated work packages.

**Key Tips:** Calculate the appropriate level of applicable funding for the total project. e.g. to calculate the grant amount for an SME participant in a consortium, if 50% of a project is Pre-Industrial research and 50% Industrial research, as defined by work package costs, then the total eligible level of funding is 50% of total eligible project costs (50% of the project @ 55% funding = 27.5%, plus 50% of the project @ 45% funding =22.5%.

The Assessors will judge whether work packages are correctly assigned across the research categories. If the Assessors judge that they are not correctly assigned, the Agri-Tech Catalyst funding body will adjust the grant percentage accordingly. It is rarely the case that a single project contains all three categories of research.
**International Development Funding**
Applications submitted for DFID funding must include a developing country partner. The table below indicates, in green, which options for partnership are eligible. Other organisations, including non-governmental organisations (NGOs) and Civil Society Organisations (CSOs), are also eligible in addition to the core academic/business partnership.

**Requirements and eligibility**
To be eligible for funding, the project must:
- address the specific requirements of the competition as outlined in the competition overview, available in PDF format on the competition webpage: [http://bit.ly/11npro4](http://bit.ly/11npro4)
- address the submission requirements as described in this document
- be based on research conducted in the UK; or outside the UK where an application is specifically seeking funding from DFID for proposals related to International Development. In the latter case, collaboration with relevant and approved overseas partners will be permitted. All funding will however, be routed via UK based organisations and institutions.
• be collaborative and industry focused with a clear case for business benefit and/or international development benefits.

Please note: Applicants must ensure that all of the proposed research, both that in the UK and internationally, will comply with the principles of BBSRC’s and other UK funders’ common guidance on “Responsibility in the use of animals in bioscience research” http://www.bbsrc.ac.uk/organisation/policies/position/policy/animals-in-bioscience-research.aspx.

In particular, UK Institutions should be aware of the following aspect of the guidance relating to research or collaboration outside the UK:

“When collaborating with other laboratories, or where animal facilities are provided by third parties, researchers and the local ethics committee in the UK should satisfy themselves that welfare standards consistent with the principles of UK legislation (e.g. the Animals (Scientific Procedures) Act 1986), and set out in this guidance, are applied and maintained. Where there are significant deviations, prior approval from the funding body should be sought and agreed.

International Development Impact
The UK Agricultural Technologies (Agri-Tech) sector, including academic institutions and businesses, has an internationally recognised comparative advantage with respect to post-harvest and value chain knowledge and technology. In developing countries, the intended users of new technology are poor. This is important for two reasons. First, the poor have limited purchasing power, leaving firms with little incentive to develop technologies for them. There is an argument in favour of incentivising the development of technologies that address the needs of the poor. Moreover, the fact that the poor are a user group that firms are less familiar with means it is difficult to assess the potential demand for new technologies (uncertain/unknown demands and returns), exacerbating the risk involved in developing new products for them. Incentivising and introducing new players into this thin market will reveal more information about poor consumers, reducing risks and potentially encouraging others.

Applicants to the Agri-Tech Catalyst intending to access DFID funding must demonstrate how their application will contribute to international development outcomes, specifically enhanced food security, nutrition and welfare of the poor. The Catalyst mechanism provides an excellent opportunity to use UK agri-tech sector skills to support international development and identify new markets for UK technology and skills. It will also enable the Agri-Tech sector in developing countries to source new technology and learn from the world leading UK sector.

The impact of funded projects should target one of the following through increased pace and scale of uptake of sustainable intensification and post-harvest innovation by farmers in developing countries:

• Sustained reduction of poverty and hunger of small-holder farmers;
• Sustainable intensification in developing country agriculture;
• Improvements in human health and diversity in diets and nutrition;
• Positive impact on rural income and food security; or,
• Facilitating trade in agricultural products.

Gender analysis and data disaggregation
When discussing poor people, you should recognise that men and women may experience poverty differently and face different obstacles in moving out of poverty. It should not be assumed that the household is a unit in which everything is pooled and shared, and in which the household head makes optimum decisions on behalf of all household members. Proposals should recognise that to promote gender equality and empower girls and women is not only a goal in its own right, but is also often a means to achieving other goals.
For this reason you should ensure that gender analysis is integrated. You are advised not to refer to any category of persons without making it clear whether you are referring to both women and men, and whether/how you have taken into account possible gender difference in experience and circumstances. For example, do not refer to ‘farmers’ without indicating whether the reference is to male farmers, female farmers, or both. Data should also be disaggregated, where relevant, across a range of variables in addition to gender including ethnicity, age, disability and spatial geography. You should consider the need for expertise on gender and social analysis.

**Competition key dates for your calendar**

If you are intending to submit an application to this competition, please make a note of the key dates below for Round 5.

The deadlines below are absolute and final. Please note that our submission deadlines are always at 12.00 noon (UK time) and we are unable to accept any applications after this time.

The Agri-Tech Catalyst will operate in response mode and will in essence be "always open". However, there may be occasions when the programme is closed for a short period between funding Rounds. To assist the processing of applications there are key submission and assessment dates referred to as “Rounds”. Dates for following rounds will be published on the competition website.

**The deadlines below are absolute. You must submit your application in the Round in which you have registered. Registration closes for each Round one week before the Submission deadline.**

**Registration for the next Round typically opens immediately after the previous submission deadline for applications.**

**Applicants who register for a particular Round and who do not submit in that Round will need to re-register for a later Round in order to obtain valid documentation and login and password for their application submission.**

Important Note:
*Please do not leave your submission to the last minute.*

If any technical difficulties arise or if you identify any errors in your submission, we will not be able to grant an extension to the above deadlines.

It is your responsibility to ensure you follow the competition guidance rules and in doing so allow sufficient time to complete all of the competition requirements described in this document.

**Competition process**

The Early-Stage Awards category will follow a single stage process:

**Single Stage Application Process**

1. **Submission of your application**
   - Submission of full application and completed documentation

2. **Assessment & Panel**
   - Applications are assessed by written review and moderation panel involving independent experts.

**2. How to apply for this competition**

1. [REGISTER](https://interact.innovateuk.org/)

   To enter this competition, the lead partner for your project must register via the competition website at [https://interact.innovateuk.org/](https://interact.innovateuk.org/)

   You will receive an email acknowledgement of your registration immediately and then an additional email containing a username and password for our secure upload facility, along with a unique application form and number. Following your registration acknowledgement, please allow up to 48 hours for receipt of your email application form.

   Please note: As stated in the above Key Dates section, the last date to register for a competition is noon 7 days prior to the close date.
Multiple project applications
If you wish to apply for funding for more than one project, you must register once and then request additional application forms by emailing an additional registration request to support@innovateuk.gov.uk. You will then be able to make separate submissions by completing a unique application form for each separate project, ensuring the appropriate application form is uploaded to the site under the correct application number. If you submit into different awards, please ensure you use the application form sent to you after registering for the award.

If repeat applications for the same project are submitted, then the repeat applications will be ineligible and not assessed.

Once you have received your unique username and password, you can log into the secure website to access additional documentation relevant to the competition. For this competition these are:

- Finance forms

The Early-Stage Awards process requires you to submit the following documents:

- Application Form supplied with your unique application number
- Project Appendices (please see Section 4 for more information)
- Partner Finance Form (for every non-academic partner in your project)
- Academic Partner Finance Form (for every academic partner in your project – if any)
- Je-S Submission pdf Output Document (for every academic partner in your project – if any)

The appendices allow you to provide additional supporting information for the assessors on your project. The finance forms provide details on your project costs for each partner in your project consortium. For information on eligible project costs and the partner finance forms please click here https://interact.innovateuk.org/-/project-costs

Please ensure that you allow plenty of time to upload your completed documents for submission to the competition. Our submission close dates can be very busy which means that upload can take longer than usual. We recommend that you upload your application in plenty of time as the deadline is final.

To upload your application documents, log on to the secure website using the details supplied with your secure username and password. See detailed instructions here: https://interact.innovateuk.org/-/submitting-your-application

Once the competition submission deadline is reached, your application is sent for assessment. We will notify you or your lead partner of the outcome of your application on the date stated in the timeline.
You will be able to access feedback on your application from the assessors by logging into the secure site on or after the date published in the key dates section.

3. The application form

This section explains the structure of the application forms and offers guidance on the information to include in each section.

There are 10 questions in the application form and each question is worth a maximum of 10 points. The assessors will mark and provide feedback on each question. They will provide additional feedback on the proposal including their overall opinion, the main strengths and weaknesses.

Applications must score a minimum of 60% in every question to be considered for funding. The application form consists of the following:

- Application details
- Summary of proposed project
- Gateway question: scope
- Public funding
- Academic collaborators
- Section 1 – The business proposition (4 questions – 4 pages)
- Section 2 – Project details (4 questions – 4 pages)
- Section 3 – Funding and added value (2 questions – 2 pages)
- Public description of the project
- Other funding from public sector bodies
- Finance summary table

Sections 1 to 3, highlighted above, address specific questions; these are listed in the following tables with guidance notes. When you submit your application form, it will be assessed according to how well it answers the specific questions. Each question has an equal weighting of 10 marks per question.

It is important that you address and respond to each question clearly. To help you, the guidance below provides an explanation of what is required for each question. The guidance notes are not intended to be exhaustive; you should develop your own responses based on your own skills, knowledge and experience.

When completing the application form it is important to take into account that the space provided is to enable you to give the specific amount of information for each question as you feel appropriate for the application. You are encouraged, therefore, to utilise fully all available space and any appendices at your disposal.

Please ensure that you upload the final and complete version of your application by the deadline.

It is your sole responsibility to ensure you upload the application form intended for submission and assessment and not a blank or incomplete application form.
Key tips
Number the answers to each question and use headings for the answer to each question.

Important: Please note the following process requirements for the application form:

- You may only use the application form provided. It contains specific information including a unique reference number for your project.
- The application form contains specific fields and it is important that you complete each field and present a fully completed form. Incomplete forms will be rejected.
- The application form must not be altered, converted or saved as a different version of Microsoft Word.
- The space provided in each field of the form is fixed and you must restrict the content of your responses in each of the fields to the space provided. The typeface, font size and colour are predetermined and cannot be changed. Illustrations and graphics cannot be included in the application form. Please check your completed application form in PRINT VIEW: any text that can’t be seen in this view or when the form is printed will not be assessed.
- The light grey shaded fields are completed automatically from other information entered on the form, e.g, the total columns of a table. These cannot be overwritten.

**Summary of proposed project (not scored)**

<table>
<thead>
<tr>
<th>Question</th>
<th>Guidance</th>
</tr>
</thead>
</table>
| Please provide a short summary of the content and objectives of the project including what is innovative about it. | This is an opportunity to provide a short summary of the key objectives and focus areas of the project. It is important that this summary is presented in reference to the main outline of the project, with sufficient information to provide a clear understanding of the overall vision of the project and its innovative nature.  

**This summary is not scored, but provides an introduction of your proposal to enable assessor allocation.** |

**Gateway question: Scope (not scored, Yes/No answer)**

**Important note:**
If the majority of assessors consider that the answer to the Scope Gateway question is ‘No’, then the application will not be approved for funding. Guidance on the ‘Gateway Question: Scope’ is, therefore, critically important and is provided below.
**Public Funding**

This section is to enable us to understand your previous track record in delivering and exploiting publicly funded project/s and may be used to inform a funding decision.

<table>
<thead>
<tr>
<th>Question</th>
<th>Guidance</th>
</tr>
</thead>
</table>
| Have you received public funding in the previous 5 years for research that led to key evidence to support your project? | Please select yes or no.  
If yes, please describe the funding in terms of the value and who the funding body was. If the funding was provided by Innovate UK, please list the Innovate UK project number. Please summarise the project aims and the outcomes of the project and how you sought to commercialise since the project completion. |

**Academic Collaborators**

This section enables us to readily identify any academic collaborators so that we can manage potential conflicts of interest during the assessor selection process and to readily identify projects which are seeking to translate previously publicly funded research (a main focus of the Agri-Tech Catalyst and part of metric collection).

<table>
<thead>
<tr>
<th>Question</th>
<th>Guidance</th>
</tr>
</thead>
</table>
| Does your project have an academic partner? | Please select yes or no.  
If yes, please list the lead investigator (name, department and institution).  
If this project is translating previous UK publicly funded research performed by this academic partner, please summarise this recent research (i.e. relevant research within last 5-10yrs) including which funders and project codes |
<table>
<thead>
<tr>
<th>Question</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. What is the Agri-Tech challenge that your project intends to address and with what solution?</td>
<td>This section is for you to describe the relevant Agri-Tech challenge that you are seeking to address, the nature of your proposed solution and how this creates a commercial opportunity for your business. Describe the nature of the challenges or issues facing agriculture and its effective delivery specific to your area, and how the intended outputs of the project will address these challenges and issues. Compare and contrast the current landscape and the proposed solution, reference existing products and practices that are currently in use and under development and discuss their benefits and shortcomings (both technical, commercial and environmental). Describe how the solution you are proposing is better than competing solutions and to what extent will the intended outputs of the project satisfy the resultant market need? Quantify the potential positive impact at primary production level detailing the potential uptake and the benefits your solution will provide.</td>
</tr>
<tr>
<td>2. What is innovative about your idea?</td>
<td>Describe the product/offering differentiation or ‘unique selling point’. You should identify the extent to which the project is innovative, commercially, scientifically and technically. In evaluating this section Assessors will consider: • does it push boundaries over and beyond current leading-edge world science and technology? • is it looking to apply existing technologies in new areas and if so what are the challenges in doing so and would it ultimately be innovative in the area of application? The timeliness and novelty of the research aspects of the project should be highlighted and explained in an industrial and/or research / academic context. You should provide evidence that you have researched potential competitors, both in the UK and internationally, who may be developing responses to the same market opportunity. You should demonstrate that you have considered your potential competitors, and how the project outcomes might be differentiated from anticipated competitive offerings. This could include the results of competitor analyses, literature surveys etc.</td>
</tr>
</tbody>
</table>
3. Do you have freedom to operate?

Provide evidence to show that you have freedom to operate (summarise results of patent searches etc). Detail your position regarding protected (background) and potentially protectable intellectual property (provide a summary of current IP). Detail any IP which may affect project delivery and exploitation. State the ownership of IP and where necessary how rights have been assigned.

Describe your strategy for protecting the knowledge arising from the project.

4. How do you intend to exploit the opportunity?

You should list the potential exploitable outputs of the project such as:

- products or services
- processes or practices
- applications to increase agricultural productivity
- environmental benefits (quantified where possible)

Describe how these outputs will be exploited including where applicable the route to market, reconfiguration of the value system, changes to business models and business processes and other methods of exploitation and protection.

Describe the further development plans for the project post completion (if any) and the needs of the business to achieve them, such as further investment (duration and scale). Outline any potential barriers to exploitation/adoptions.

Please provide evidence that the proposed solution would be commercially viable for the target market (consider cost of manufacture, pricing etc).

You should describe the size of the market opportunities that this project might open up, including details of:

- current nature of the specific market(s) at which the project is targeted (e.g. is it characterised by price or competition amongst commoditised suppliers? Is it dominated by a single leading firm? etc);
- the dynamics of this market including quantifying its current size, actual and predicted growth rates;
- the projected market share for the project outcome, with justification in the light of any potential competitors;

Please provide evidence for your statements about the addressable market for project outcomes, outline your strategy for developing market share and quantify your projected return on investment from the project.
For highly innovative projects where the market may be unexplored, please explain:
- what the route to market could or might be;
- what its size might be; and
- how the project will seek to explore the market potential.

**International Development Impact**
Projects targeting international development objectives should describe anticipated benefits to developing countries, which may include:
- Integrating small-holders into supply chains
  - Meeting quality standards, improving productivity
  - New supply chains
- Increasing value of production to small-holders
- Improving access to appropriate innovation in developing countries
- Innovation that increases rural income through improved processing/storage
- Control of crop pests/weeds/diseases

**PLEASE NOTE:** Where research organisations are involved in a project and funded for undertaking non-economic activity, we will expect to see evidence in the answer to this question of plans to disseminate their project outputs over a reasonable timescale. The requirement for dissemination of research results intends to secure wider benefit from the higher level of public support given to research organisations. For further information, please click here: [https://interact.innovateuk.org/-/funding-rules](https://interact.innovateuk.org/-/funding-rules)

### Section 2: Project Details

<table>
<thead>
<tr>
<th>Question</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>5. What is the underpinning scientific evidence?</strong></td>
<td>Detail all relevant prior experimental/technical evidence and explain how the previous results bridge to the proposed study. <strong>Please use Appendix A to present relevant figures such as graphs or schematics (max 2 pages), note this should not be used for additional narrative.</strong></td>
</tr>
</tbody>
</table>
| **6. What technical approach will be adopted and how will the project be managed?** | Please provide a description of the technical approach including the main objectives of the work. Link the main areas of work together with their resource and management requirements. In evaluating this the Assessors will consider:  
- is the technical and methodological approach appropriate to the needs of the project and are the innovative steps achievable through the proposed approach?  
- is the project plan sufficient in comparison to the complexity of the project? For example, is there sufficient detail to understand the tasks involved and the resources required?  
- are the timing of key milestones realistic? |
7. What are the risks (technical, commercial and environmental) to project success? What is the project’s risk management strategy?

The Agri-Tech Catalyst funders recognise that projects of this type are inherently risky, but seek assurance that the projects it funds have adequate arrangements for managing this risk. Please focus on the arrangements for managing and mitigating risk as follows:

- identify the key risks and uncertainties of the project and provide a detailed risk analysis for the project content and approach, including the technical (including regulatory), commercial, managerial and environmental risks as well as other uncertainties (e.g. ethical issues) associated with the project. The main risks should then be rated as High/Medium/Low (H/M/L) (Risk Register);
- discuss the potential impact of these scenarios;
- state how the project would mitigate these key risks;
- you should address all significant and relevant risks and their mitigation;
- identify key project management tools and mechanisms that will be implemented to provide confidence that sufficient control will be in place to minimise operational risk and, therefore, promote successful project delivery. This should include the arrangements for managing the consortium.

8. Does your team have the right skills and experience and access to facilities to deliver the project and exploit it?

Please detail the expertise and track record of your project participants, both collaborators and subcontractors, in undertaking and exploiting the results of research and development projects, to show your capability to deliver the project and exploit the technology.

In evaluating this, the Assessors will consider whether:

- your project participants have the right available mix of skills and experience to deliver the project successfully;
- your project utilises the input of research expertise where necessary;
- the project builds the UK supply chain and addresses end-user needs internationally as appropriate;
- the project has access to the necessary expertise to commercialise the outcomes;
- the consortium’s formation objectives are clear and it would not have been formed without Agri-Tech Catalyst funding investment; Extra benefit demonstrated from the collaboration, for example, increased knowledge transfer; the consortium is greater than the sum of its parts;
- the work is being conducted internally where possible and if subcontractors are being used, there is adequate justification for the choice made.

For projects not including International Development, if you are planning to use subcontractors outside the UK then you must provide evidence that no UK alternative exists or strong justification to support your choice of non-UK contractor.

### Section 3: Funding and added value

<table>
<thead>
<tr>
<th>Question</th>
<th>Guidance</th>
</tr>
</thead>
</table>
| 9. What are the resources required to deliver the project and their cost? | Indicate the anticipated project cost making clear the level of contribution from any project participants and the level of funding required from the Agri-Tech Catalyst funding body. This information should be provided in the financial summary table in the application form.  
Please use this section to detail the resources required to carry out the project, fully break down the costs and justify them (for example quotations to evidence value for money). This should include all internal and external costs.  
Supporting information and explanation for project costs should be provided in this section of the form. It must be consistent with the category of research & development being undertaken within each work package. Please ensure the grant for business partners is calculated in line with the grant intervention rates provided in this document.  
**Important:** If the project spans more than one type of funding (e.g., because significant work packages are in both Early stage feasibility studies and industrial), you must describe and justify the breakdown of costs between them within the answer to this question.  
In evaluating this the assessors will consider the following questions:  
- is the budget realistic for the scale and complexity of the project?  
- is it clear how costs are being allocated?  
- does the financial support required from the Agri-Tech Catalyst fit within the limits set by the specific competition?  
- does the funding request provide value for public money?  
- is a financial commitment from other sources demonstrated for the balance of the project costs?  
- has a realistic budget breakdown been provided?  
- have work package breakdowns been described and justified adequately? |
Detailed guidance on eligible and ineligible project costs is provided on our website: [https://interact.innovateuk.org/-/project-costs](https://interact.innovateuk.org/-/project-costs)

Ensure that all key points relating to the finances of your project that you wish the assessors to consider are included in the main body of your application form, or in the relevant appendix, as these are the key documents used within the assessment process.

<table>
<thead>
<tr>
<th>10. How does financial support from the Agri-Tech Catalyst add value?</th>
</tr>
</thead>
</table>
| Please provide evidence that:  
  - successful delivery of your project will increase the total amount of money the project team spends on research & development in the UK and either:  
    - why the funding is required for the project to be able to proceed  
    - how the Agri-Tech Catalyst funding would allow you to undertake the project differently (more quickly, on a larger scale etc) and why this would be beneficial to the UK and / or international development objectives to benefit developing countries?  

Outline how successfully securing funding will enable your business to provide value to the UK economy during the project lifetime and up to 5 years beyond the end of the project; or to realise International Development objectives as appropriate.  

This may involve (but is not limited to), leveraging additional investment, increasing your research and development spend, creating jobs and increasing revenue within the UK.

If you are anticipating this grant will leverage additional private investment please detail your progress in securing commitment or interest from potential investors and/or international development benefits.

If your project is targeting international development outcomes you must demonstrate how a successful application will contribute to enhanced food security, nutrition and welfare of the poor and how you will measure this contribution.

<table>
<thead>
<tr>
<th>Public description of the project (not scored)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Question</strong></td>
</tr>
</tbody>
</table>
| If your application is successful, the Agri-Tech Catalyst funders will publish the following brief description of your proposal. Provision of this description is mandatory but will not be assessed. | To comply with Government practice on openness and transparency of public-funded activities, the Agri-Tech funders have to publish information relating to funded projects. Please provide a short description of your proposal in a way that will be comprehensible to the general public. Do not include any commercially confidential information, for example intellectual property or patent details, in this summary.  

** Whilst this section is not assessed, provision of this public description is mandatory. Funding will not be provided to successful projects without this. |
### Finance summary table

<table>
<thead>
<tr>

<td>Funding sought from the Agri-Tech Catalyst</td>
<td>Please enter the funding sought from the Agri-Tech Catalyst for each participant organisation for this competition.</td>
</tr>
<tr>
<td>Column 7</td>
<td>Other funding from public sector bodies</td>
<td>Please include any funding for the project from any other public sector bodies which has been applied for separately, and not as part of this competition. Funding from other public sector bodies might include other applications to research councils, other government departments, devolved administrations, other public sector organisations and some charities. The purpose of this column is to provide the Agri-Tech Catalyst funders with information on the total public funding for the project.</td>
</tr>
<tr>
<td>Column 8</td>
<td>Total (£)</td>
<td>The total cost of the project – this is the sum of columns 5, 6 and 7 and will be entered automatically.</td>
</tr>
<tr>
<td>Bottom Row</td>
<td>Total (£)</td>
<td>The total of each column will be entered automatically.</td>
</tr>
</tbody>
</table>

For full stage applications, you will be asked to submit a finance form for each industry and academic participant in your project which provides more detailed information on the total costs listed in your finance summary table.

For information on eligible project costs and how to complete the finance forms see the website [https://interact.innovateuk.org/-/project-costs](https://interact.innovateuk.org/-/project-costs) or download as a pdf file.
4. Project appendices

Appendices requirements for an application form
Appendices are submitted with the application form. It is important to note that these are intended to contain supporting information and not substantive elements of answers to the application form questions. Do not, therefore, use the appendices as an overflow to or to replace completion of the application form unless otherwise stated below.

In order that assessors can open and read the appendices, each appendix must: conform to the maximum length specifications listed below
- be submitted in Portable Document Format (.pdf)
  be legible at 100% zoom/magnification
- display prominently the ‘Project title’ as entered on page 1 of the application form
- be named as per the specifications given in the guidance ‘Submitting your Application’ click here: https://interact.innovateuk.org/-/submitting-your-application

If you submit appendices longer than specified below, they will be truncated and the excess discarded.

Appendices may be printed or photocopied in black and white, so colour should not be used as the sole method of conveying important information.

<table>
<thead>
<tr>
<th>Appendix</th>
<th>Guidance</th>
</tr>
</thead>
<tbody>
<tr>
<td>Appendix A</td>
<td>Use Appendix A to present relevant figures such as graphs or schematics, note this should not be used as additional narrative to question 5.</td>

<tr>
<td>Appendix C</td>
<td>Use Appendix C to provide additional information on your design/protocol/approach to support question 6.</td>
</tr>
<tr>
<td>Up to 2 sides of A4</td>
<td></td>
</tr>
</tbody>
</table>

5. Finance forms and project costs

Information on project finances is available in the guidance ‘Your Project Costs’ on our website: https://interact.innovateuk.org/-/project-costs

Additional guidance for completing the partner finance form

The Agri-Tech Catalyst has specific grant rates and applicants will therefore need to calculate the amount of grant they can claim and manually enter this into the partner finance form, over-writing the automatic calculation.

You should do this on the ‘Project Costs Summary’ tab. Cell P22 shows the total project costs which are eligible to claim grant against. This should be used to calculate the amount of grant which can be claimed, based on the funding levels on page 9 of this document. The amount of grant should then be entered in to cell D28. This will be reflected on the ‘Form Status’ tab which shows the figures that should be entered into the Finance Summary Table in the application form.
6. How to find out more (Data Protection Act 1998, Information Security, etc)

If you require further information or have a query regarding this competition, please contact Customer Support Services on:

E-mail: support@innovateuk.gov.uk

Tel: 0300 321 4357
