About us

- We develop solutions for:
 - Multi-modal (Roads, Rail, PT, Cyclists, Peds, Freight) transport optimisation
 - Multi-modal real-time and predictive traffic management systems
 - Journey planner and user information systems
 - Transport data fusion and analytics
 - Adaptive traffic signals
- Accident data validation and safety analysis

What we can offer

- Real-time and predictive traffic management and optimisation solutions
<http://vision-traffic.ptvgroup.com/en-us/products/ptv-optima/>
- Integrating data and information between:
 - Traffic control centres
 - Multi-modal network users
 - Stakeholders (eg emergency services)
 - Freight fleet operators

What's your innovation/idea

- A system that can provide predicted information about the current and future conditions to both control centres and network users
- Help optimise infrastructure and user journeys
- Support control centres to implement real-time decisions backed by data and forecasts
- Enable network users to adapt their travel and mode choices supported by real-time and forecast data

What or who we are seeking

- We can supply solutions to bidders
- Support with training
- Collaborate on implementation

What's the market opportunity you are addressing

- Advanced technology for traffic control centres
- Enhanced information to network users about their travel needs
- Increased collaboration between different stakeholders in the transport industry
