### About us

- Award winning engineering R&D company specialising in cleantech
- Recognised as innovators in heat capture technology

### What we can offer

- Expertise in heat capture technology.
- Agile, innovative team & professional project management.
- Working proof of concept prototype (TRL 3-4).

### What or who we are seeking

- Partners and funding to develop and commercially test the technology

### What's your innovation/idea

- System to harvest thermal energy from diesel engines, convert this into useful energy for use on or off the vehicle.
- Possible uses for captured waste heat include depot heating/hot water, train washing, pre-heating driver cabin, pre-heating engine, etc.

### What's the market opportunity you are addressing

- Reduce diesel emissions, fuel usage and engine wear and tear.
- Reduce fuel used for heating and hot water in depots.
