About us

- A software development company that specialises in creating software solutions that support businesses in achieving more effective delivery of work.
- A leader in Rail asset management, visualisation of Train path planning and assignment of Driver Route Knowledge.
- Providing systems that enhance processes and enable visualisation of diverse data layers into the RTS Mapper – by Line of Route, ELR, Miles/Chains & Tiploc/ Stanox through geographic information systems.

What we can offer

- The RTS application delivers to FOC & TOC community the right visualisations at the right time of Route Knowledge & Train Paths.
- Without I.T. technical know-how users can understand and manage information on Route Knowledge & Train paths

What's your innovation/idea

- The ability to align Route Knowledge to train plan data & visualise into RTS Mapper views to support decision making.

What or who we are seeking

- FOC's & TOC's who manage driver Route Knowledge & plan train services/paths
- Businesses that want to reduce costs and increase efficiencies

What's the market opportunity

- Through provision of the Rail Spatial solution and collaborative working the ability to improve efficiency & communication
