About us

- Company formed in 2007 to develop an efficient means to manufacture composites made directly from mixed plastic packaging waste.
- This aim has been met whereby a wide range of composite products can be made and sold at prices that compete and in many cases undercut the wood and concrete products they replace.
- Our team has more than 40 years experience in design, development and successful delivery of a number of significant plastics recycling projects.

What we can offer

- Expertise in design, development & delivery of turnkey projects.
- Specific knowledge & experience allied to manufacture & marketing of recycled plastic products.

What or who we are seeking

- To licence the process technology globally.
- Licensees who realise the urgent need to find commercially viable & sustainable solutions to recycle plastic waste.

What's your innovation/idea

- State of the art, proven process technology enabling a wide range of consistent quality products to be made from mixed plastic waste.
- Composites that compete and in many cases undercut the price of the wood and concrete products they replace.

What's the market opportunity you are addressing

- Composite kerbs in place of concrete.
- Heavy duty composites in place of tropical hardwood no longer obtainable from certified sources.
- Composite rail sleepers in place of creosote treated wood sleepers
