

CENTRAL RESEARCH LABORATORY

CRL INCUBATOR PROGRAMME

This summer, we're launching London's first adaptive incubator for hardware start-ups. The Central Research Lab (CRL).

OUR STORY

The CRL is based at The Old Vinyl Factory in Hayes, West London. The site is the former home of EMI and HMV's global headquarters, where records by the Beatles and Rolling Stones were produced and shipped the world over.

More exciting still, inventions that originated from the site include the first CAT scanner, stereo sound for home use and airborne radar.

The original CRL was world famous as a hotbed of design and technological innovation. Our ambition for the new CRL is just as big.

We want to reinvent the spirit of creative collaboration that led to those successes. We want the CRL to help bridge the gap between makers and the marketplace.

THE OFFER

Too often, skilled designers and makers with a great product aren't able to take it to market, not because the idea or team isn't good enough, but because they lack the funding, contacts, or manufacturing expertise to make it happen. That's where the CRL comes in.

For up to one year, with no loss of IP or equity on entry, we're offering:

- 24/7 access to a beautiful shared studio space
- Membership of a community of inspiring designers and makers
- One-to-one mentoring
- Prototyping equipment + technical support
- On-site design for manufacture expertise from our team
- An unbeatable contact list
- Support to raise funding

We're looking for teams of 1 to 4 with a great product they want to turn into a successful business. Apply now at the CRL website.
