

TerraVerdae is an innovative green materials and chemicals company dedicated to the development of sustainable products from C1 (single carbon) feedstocks such as methanol and methane.

## VALUE PROPOSITION

### BIOPROCESS

Specialists in industrial scale bioprocesses utilising waste-derived C1 feedstocks from non-agricultural sources that avoid food security and land-use concerns

### BIOMATERIALS

Industrial scale production of PHA bioplastics that are waste-derived, bio-based and biodegradable

Development of speciality and high performance bio-based resins, biomaterials and biocomposite products

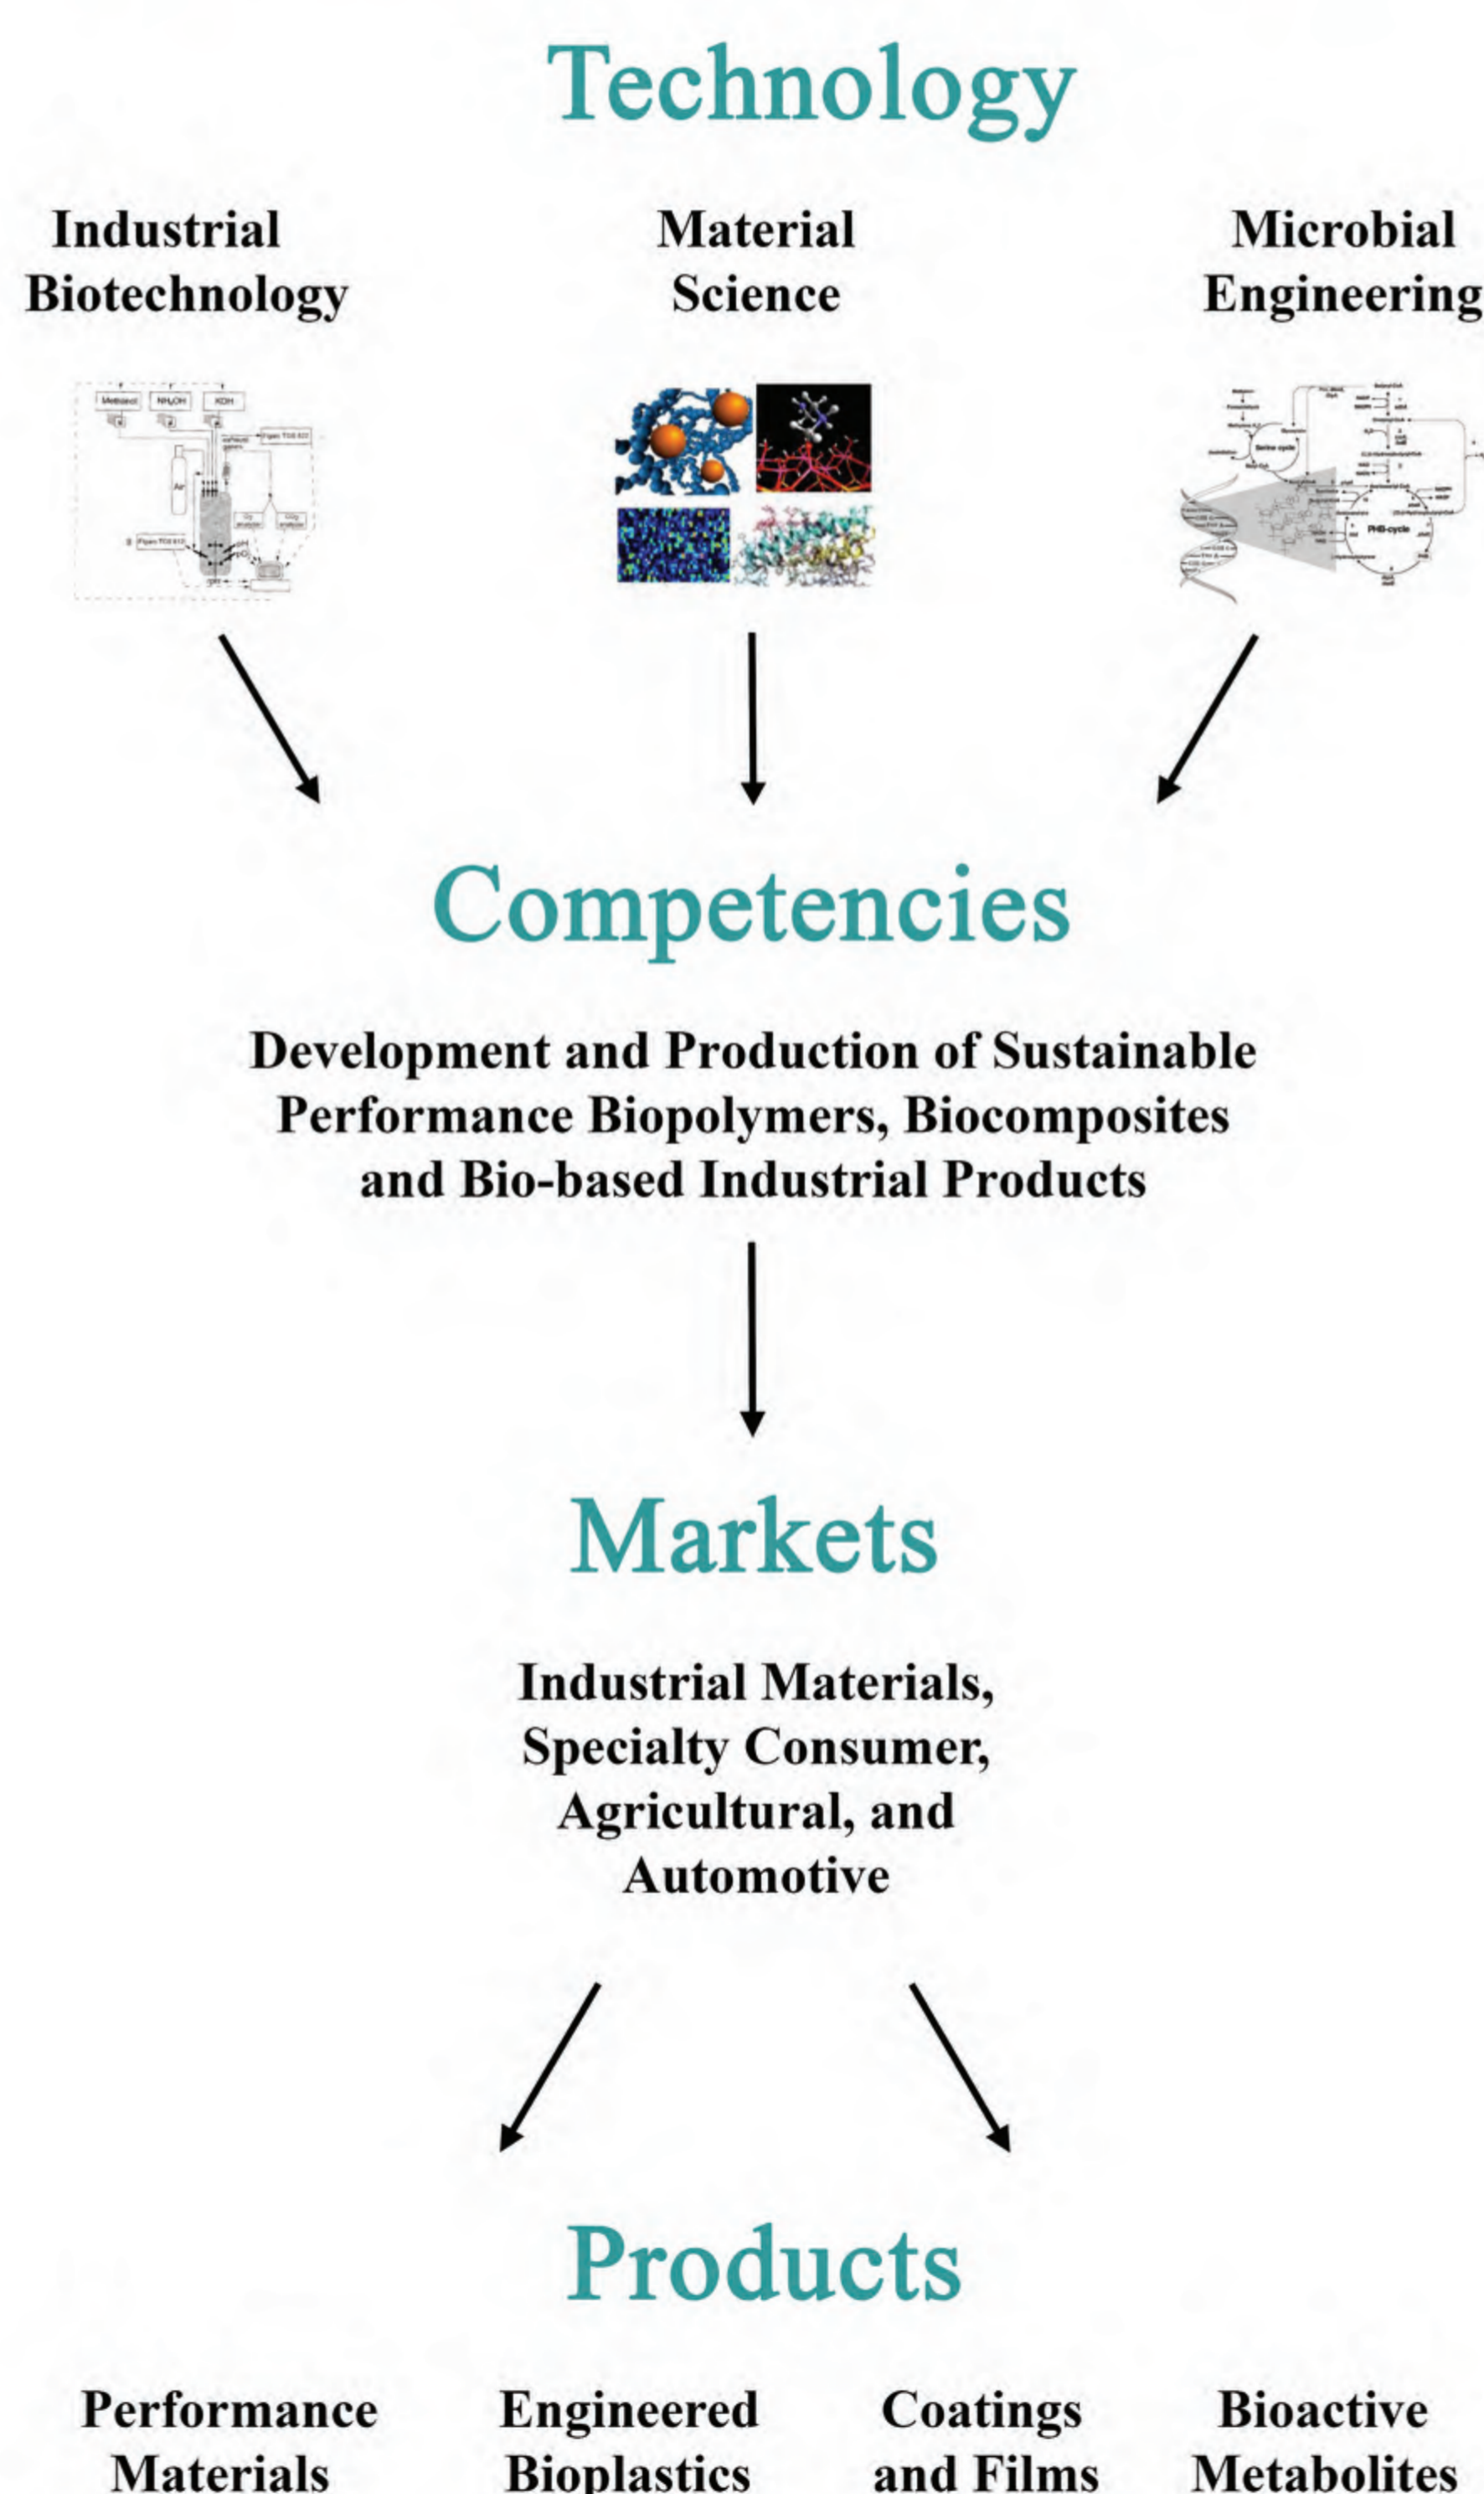

### BIOACTIVES

Developing a portfolio of bioactive metabolites ingredients and products for use in Cosmetics, Flavours & Fragrances, and Nutritional Supplement applications

### SERVICES

Strong multi-disciplinary capability specialising in difficult to express pathways and challenging proteins utilising our synthetic biology platform with proprietary genetic tools and protein expression system
