

CORFO

November 2015

Gobierno
de Chile

Productivity, Innovation, and Growth Agenda: CORFO promotes programs of Intelligent Specialization to sophisticate and diversify the Chilean Economy.

Programs of Intelligent Specialization, based on a participatory methodology of fourfold helix which supports the identification of:

New **challenges or opportunities** for diversification and/or sophistication towards the interior of a sector, subsector, and/or habilitating platform of the country's economy.

The process of **detecting and prioritizing of gaps** to achieve the challenge or identified opportunity.

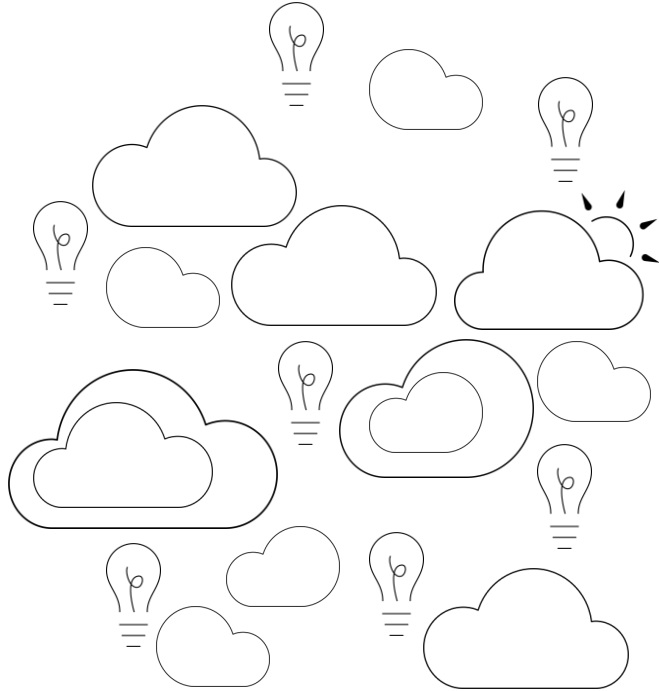

The **construction and implementation of a roadmap** with activities to close the gaps.

Promotion of Technological Diffusion and Business Innovation

OBJECTIVE

To impact on the **development** of Chile through the substantial increase of the proportion of **companies** developing **projects of innovation** of products and process and the **innovative capacities** of the **companies**, allowing them to achieve significant changes in **productivity and competitiveness**.

We must promote the development of ecosystems of innovation and entrepreneurship.

Where universities, centers of R&D, entrepreneurs and companies live in spaces of collaboration that strengthen the initiatives generating proposals with greater added value which allows for more competitive scenarios.
