

Webinars: Fast & efficient on-line networking

For many organisations, committing time, travel and other resources to finding future technologies, funding and partnership opportunities is key to sustainability - yet hard to justify over short term priorities to deliver.

Chemistry Innovation offers a solution to these challenges through its 'webinar' facility.

The live conferencing facility is a key feature of Chemistry Innovation's webportal. It provides a highly efficient process for linking stakeholders and facilitating detailed 'interactive' communication direct from the comfort of your own PC.

Content is focused on topical issues including technical opportunities, funding calls and strategic developments in innovation.

Delegates benefit from access to electronic presentations and live interaction with experts and other delegates in their community of common interest.

Individuals and companies also gain valuable benefit from this service by saving on the time, cost and environmental impact of travel associated with conventional conferences/events.

Participation is free and simple

To participate in a live webinar event, you will require a headset (available from Chemistry Innovation).

Quality is assured through speaker and moderator training while delegate participation is eased by a simple registration process, event access procedure and technical support where necessary.

To listen to a live webinar (or recording of a saved event) ensure your PC speakers are plugged in and switched on!

To learn more about webinars and/or register interest in a future event, go to: www.chemistryinnovation.co.uk and click on the 'Webinars' link under 'Events' at the bottom of the left hand menu bar.

OVER 300 DELEGATES PARTICIPATED IN THE 2007 WEBINAR SERIES

During 2007, Chemistry Innovation facilitated 12 webinars - specially selected to provide awareness of key priority areas and funding calls that could help stimulate innovation across the chemistry-using industries. The 2007 webinar series attracted over 300 delegates from a wide spectrum of industries and covered:

- Exploitation opportunities from Russian Nanoparticle technology
- Nanotechnology (1) – the impact of high value applications
- Nanotechnology (2) – the impact of high value applications
- Hygienic and biocompatible surfaces from nanoparticle deposition
- Boosting R&D productivity using High Throughput Technology (HTT)
- European Funding – A guide to European alphabet soup
- DTI/Technology Strategy Board Collaborative Research Funding call (1)
- Smart science – Managing the potential benefits and risks of nanotechnology
- DTI/Technology Strategy Board Collaborative Research Funding Call (2)
- FP7 and DTI/TSB Collaborative funding
- Chemistry Innovation Sustainable Technologies Roadmap
- Technology Strategy Board Collaborative Research Funding Call (3)

Recordings of all these webinars are available on the Chemistry Innovation website

If you want to hold a webinar, or suggest a topic of broad or special interest for the series, please contact: Jenny Hadfield on Tel: 01928 515662 or enquiries@ciktn.co.uk
